DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Morris (US 3,075,526) in view of Felix et al. (US 4,941,872). Morris discloses the same invention as in claim 1, including a portable type irrigator comprising a suction hose, an air pump and a nozzle injection part by which the liquid contained in the liquid reservoir is injected directly into the interior of the large intestine through the anus. The claim differs from Morris in disclosing that the suction hose is integrally connected to a flange of the liquid supplying body. Felix et al, (US 4,941,872) discloses the nozzle injection part being connected to a connecting member of the liquid supplying body. However, regarding the rest of claim 1 and all of claim 2 Felix et al (US 4,941,872) does not disclose the above nozzle injection part being connected to a connection member of the liquid supplying body in a spiral manner, and the air pump be mounted to a lower side of the entrance/exit passage for liquid communicated with a supplying passage of the liquid supplying body, wherein the above nozzle injection part has a plurality of hole arranged in a radial direction at a front end of the nozzle injection part. However, these parameters are deemed matters of design choice, well within the skill of the ordinary artisan, obtained through routine experimentation in determining optimum results.
